

Equine Care Checklist: POST-STORM RECOVERY

Check Animal Condition

- Once the storm has passed, check animals for injury or illness.
- If a horse is missing, contact your local animal control office.

Feed & Water

- Ensure each horse has feed and water.
- If you rely on well water and experienced any flooding, keep potential contamination issues in mind when you are refilling water troughs.
- Ensure feed has not been soiled and is dry and free of mold.

Check Pastures

- Make sure flooding has receded before reintroducing horses to the area.
- Check fence lines and the rest of the pasture for debris or any other damage that could cause injury.

Record Damages

- Document any damage to trucks, trailers, barns or other insured structures or equipment.
