

Body Condition Scoring Horses

Six Areas of Focus for Equine Body Condition Scoring

In order to accurately assess a horse's Body Condition Score (BCS), you must visually assess and touch the animal. A correct BCS is very difficult without physically touching the animal (i.e. winter haircoat, muscle vs. fat, etc.).

- 1 Poor:** Animal extremely emaciated; spine and bone structure noticeable, no fatty tissue can be felt.
- 2 Very thin:** Bony structures of the neck, shoulders and withers are faint. Spine, ribs, point of hip and buttock are prominent.
- 3 Thin:** Slight fat cover over ribs; spine and ribs easily seen, but individual vertebrae cannot be identified visually. Tailhead is prominent but hips rounded.
- 4 Moderately thin:** Neck, withers and shoulders are not obviously thin. Ribs are faint. Fat can be felt around tailhead.
- 5 Moderate:** Back is flat; ribs felt but not easily seen; fat around tail head beginning to feel spongy; shoulders and neck blend smoothly into body.
- 6 Moderately fleshy:** Slight crease down back; fat over ribs and tail head spongy; slight fat along the side of withers, behind shoulders and along sides of neck.
- 7 Fleshy:** Slight crease down back; ribs can be felt but not seen, noticeable filling between ribs; fat around tail head, along withers, behind shoulders and along neck.
- 8 Fat:** Crease down back; difficult to feel ribs; fat around tail head very soft; noticeable thickening of neck; fat deposited along inner thighs.
- 9 Extremely fat:** Obvious crease down back; patchy fat appearing over ribs; bulging fat around tail head, withers, behind shoulders, and along neck; flank filled with fat.
